

Solar System Music using sympathetically resonant objects.

By Lilac Atassi

<https://youtu.be/cI0IU1Kp2pE>

The positions of the singing bowls around the rotating speaker represent the positions of the planets around the sun, on June 29/2017. In the middle there is a rotating speaker playing noise and singing bowls are resonating sympathetically to the noise played by the rotating speaker. Every singing bowl has a different frequency representing a planet of our solar system. For more info on how the distance of the singing bowls to the center (rotating speaker) is calculated
